Installing Cleverscope

Thanks very much for purchasing a Cleverscope!

Please follow these instructions to install Cleverscope:

1.   Do **NOT** plug in your Cleverscope. It's best to run setup.exe first.
2.   Run setup.exe on the CD that was supplied with the Cleverscope. You should see an installer window as below:

 Accept the pre-ticked options. Follow the prompts, and Cleverscope should be installed, including pre-installed USB drivers. If required, choose to 'Trust National Instruments software'.

3.   Connect up the acquisition unit - you'll need to plug in the power adaptor, and the USB cable to a spare port.
4.   The PC should discover the USB connection and display 'Cleverscope CS328 MSO' or similar.
5.   Startup Cleverscope (it will be in the Start Menu. You can drag it to the desktop if desired).
6.   Click on 'Auto' in the Cleverscope Control Panel, and the graph should become live.
7.   Exit Cleverscope (File/Exit) or close button.
8.   Now follow the section 'Using the CS328 acquisition unit' , page 18 of the manual to set up the probes.

Any problems, please email support@cleverscope.com

We would very much appreciate it if you would subscribe to occasional emails from us about updates, new products and tours, by entering your email address on the lower right hand side of our home page at http://www.cleverscope.com/.

You may wish to register any suggestions on the forum at http://www.cleverscope.com/forum/

You will find some useful files on the CD. These are:

- Cleverscope Guided Tour.pdf   This gives you a quick overview of what you can do
- Cleverscope Screen Shots.pdf   Shows you screen shots for common functions
- Cleverscope Manual v2-5.pdf   The Cleverscope user manual
- Cleverscope Quick Ref.pdf   This is a quick reference sheet for common activities
- Cleverscope Upgrading Hardware and application.pdf   Use this when updating the Cleverscope.
